DETAILED ACTION

This Office Action is in response to the Appeal Brief filed 3/26/04.

Response to Arguments

1. In view of the Appeal Brief filed on 3/26/04, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
 - (2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 09/896,162

Art Unit: 2653

3. Claims 5-7, 9-10, 15-17, 19-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Gill (U.S. Pat. 5,751,521).

Regarding claims 5 and 15, Gill discloses a reduced sensitivity spin valve sensor apparatus (figure 6), comprising:

at least one magnetically fixed layer 162; and

at least two free layers 158, 164;

wherein the at least one magnetically fixed layer includes at least two magnetically fixed layers 162, 156, and wherein the at least two free layers are positioned between the at least two fixed layers; and

wherein the at least two magnetically fixed layers have a parallel magnetic orientation (see orientation 168, 172).

Regarding claims 6 and 16, Gill discloses that at least one non-magnetic spacer 160 positioned between the at least one fixed layer and one of the at least two free layers.

Regarding claims 7 and 17, Gill discloses that the at least one fixed layer includes at least two fixed layers 162, 156 having a magnetic orientation approximately 90 degrees from a magnetic orientation of the at least two free layers (orientation 168 is the same as orientation 172 and both are 90 degrees from the orientations 190, 188 of the free layers.

Regarding claims 9 and 19, Gill discloses that the at least two fixed layers and the at least two free layers are spaced from one another by three non-magnetic spacers (154, 134, 160)

Art Unit: 2653

Regarding claims 10 and 20, it is evident from the reference to Gill that the magnetic flux is distributed across the at least two free layers to thereby reduce a magnetic flux fed to each free layer (see figure 6).

Regarding claim 21, Gill further discloses:

First 156, second 158, third 164, and fourth 162 ferromagnetic material layers being separated respectively from one another by three non-magnetic spacer layers 154, 134, 160, the first and fourth ferromagnetic material layers being outermost ferromagnetic material layers with respect to the second and third ferromagnetic material layers;

wherein the first and fourth ferromagnetic material layers have parallel fixed magnetization direction 168, 172;

wherein the second and third ferromagnetic material layers have magnetization directions that can rotate when under applied magnetic fields;

wherein magnetic flux is spread across at least the second and third ferromagnetic material layers to thereby reduce the magnetic flux fed to the second and third ferromagnetic layers.

Response to Arguments

4. Applicant's arguments with respect to claims 5-7, 9-10, 15-17, 19-21 have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 09/896,162

Art Unit: 2653

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Angel A Castro whose telephone number is 703-308-8435. The examiner can normally be reached on Monday through Thursday, 8 AM to 6 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William R Korzuch can be reached on 703-305-6137. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (tollfree).
